

HOW WE WILL LIVE IN THE FUTURE: CLIMATE-FRIENDLY AND SOCIALLY JUST

FINALLY THERE ARE NO MORE DRAUGHTS ...

... because people with little money can live healthily and affordably as well. The worst insulated buildings are the first ones to be renovated. The rent including heating does not rise as a result.

Warm homes for all

I HAVE THE CHOICE ...

... when energy prices rise due to the CO₂ tax, there are climate-friendly and affordable, such as well-developed bus and rail transportation and insulated homes.

Climate-friendly alternatives for all

CAREFREE TRAVEL ...

... in the city and in the countryside, even for people with disabilities, whether young or old. Public transport is well developed and affordable.

Attractive and affordable mobility for all

GENERATING MY OWN ELECTRICITY ...

... on the balcony or the roof of an apartment building – everyone benefits from affordable solar power thanks to funding programs for people with little money and thanks to a good legal framework.

Self-generated electricity for all

EVERYBODY IS CONTRIBUTING ...

... those who emit a lot of CO₂ can do a lot to save the climate. And they have a responsibility to do so! Effective laws ensure a significant reduction of “luxury” emissions.

Climate protection by everybody
